The following list outlines the general **Sequence of Events** during a disaster. This sequence may vary based on the circumstances of the disaster.

- Disaster occurs
- Local response – emergency operations center activation - declaration of state of emergency
- Continue emergency work – maintain records (labor, equipment, materials, and contracts)
- Compile initial estimated damage. Report to State emergency management agency
- Evaluate needs and request State/Federal assistance
- Federal/State survey of need – Preliminary Damage Assessment
- Governor's request for Federal assistance
- Presidential declaration
- Designate Applicant's agent
- Attend Applicants' Briefing and submit a *Request for Public Assistance*
- Attend Kickoff Meeting with Public Assistance Coordinator (PAC) – discuss project formulation
- Prepare *Project Worksheets* – work with the PAC
- Address applicable Special Considerations (floodplain management, insurance, hazard mitigation and compliance with environmental and historic preservation laws)
- Complete application for Federal funds
- Maintain required documentation (labor, equipment, materials, and contracts)
- Receive payment of small projects - for Federal share and possibly State share
- Complete approved disaster work within time allowed
- Request final inspections
- Submit documents for final inspection, program review and close-out
- Receive reimbursement – final payment on large projects
- Keep all documentation for 3 years after Applicant final expenditure report

Reference: Public Assistance Guide, FEMA 322, Appendix A
What do I need to do when a Disaster Strikes?

To ensure that work performed is well-documented both before and after a disaster is declared, you should:

- Designate a person to coordinate the accumulation of records
- Establish a file for each project where work has been or will be performed
- Maintain accurate disbursement and accounting records to document the work to be performed
What type of documentation do I need?

All of the documents pertaining to a project should be filed together with the corresponding Project Worksheet and maintained as the permanent record of the project. These records become the basis for verifying the final project costs, and, for small projects, will be used to sample and validate your estimated project costs.

Documentation is the process of establishing and maintaining accurate records of events and expenditures related to your disaster recovery work. The information required for your documentation basically describes the “who, what, when, where, why and how much” for each item of disaster recovery work.
How do I apply for Public Assistance?

- At the Applicant’s Briefing you will be provided with the first form required to apply for the program called the **Request for Public Assistance (RPA)**

- You are **not** required to wait until the applicant’s briefing for the RPA. Florida applicants can view and submit the RPA at floridapa.org

- The **RPA** establishes you as an applicant and initiates the Public Assistance process on your behalf.

- The **RPA must be submitted within 30 days of the declaration/area designation date**
Who do I contact about an Applicant Briefing and what will be discussed?

- Contact your County Emergency Management Agency to obtain a schedule.

- Topics of Discussion
  - PA/Infrastructure Support Programs
  - Eligibility of applicant, work and costs
  - Work categories
  - Funding Options
  - Insurance Requirements
  - 406 Hazard Mitigation
  - Preparation for the Project Worksheet (PW) process
  - Preparations for Kick-off Meeting
  - Role of FEMA’s Public Assistance Coordinator (PAC)
  - The appeal process
  - Requirements and the process of the PW
Topics of Discussion Continued

- Record keeping and document preparation
- Contracting procedures
- Mitigation requirements
- Small & large project requirements
- Review and approval process
- Definitions and terms
- Deadlines
- Final Inspections
- Final Claims
- Closeouts
What does the PAC do?

A PAC works in partnership with an applicant from beginning to end, providing comprehensive information, explanation, and technical assistance. As needed, the PAC can help document damage, determine eligible repair work, estimate costs, develop work projects, and identify issues, such as, insurance coverage, environmental hazards, and historic buildings, which require special attention. The earlier these considerations are identified, the sooner they can be resolved and public assistance funding made available.
Insurance

What happens if a facility is insured?

FEMA must reduce all project grants for insured property by the amount of actual insurance proceeds received or by the amount of proceeds that can be reasonably anticipated from review of the insurance policy. This reduction will be made prior to project approval and noted in the cost estimating section of the project worksheet.

Project Worksheets

- Cat A & B
- Cat A & B 72-Hour
- Permanent Work
  - Combining Categories
- Alternate Projects
- Mitigation Projects
Small vs. Large Project

- To facilitate review, approval and funding, repair projects are divided by dollar amount to small and large projects.
  - Small Project – emergency or permanent work costing from $1,000 to $57,000 (Fiscal Year 2006 and is adjusted annually)
  - Large Projects – (over $57,000) will be formulated as a team effort with FEMA. Only the basic description of the project and a broad cost estimate is required.

Do all contracts have to be competitively bid?

All contract procurement should be conducted in a manner providing full and open competition in compliance with state and local procurement regulations. Contracts will normally be competitively bid unless one of the following instances apply:

- The item is available only from a single source
- The awarding agency authorizes noncompetitive proposals
- After solicitation of a number of sources, competition is determined inadequate; or
- The contract will eliminate or reduce an immediate threat to life, public health or safety
Category A – Debris
Emergency Protective Measures are actions taken by Applicants before, during, and after a disaster to save lives, protect public health and safety, and prevent damage to improved public and private property. Emergency communications, emergency access and emergency public transportation costs may also be eligible.

Examples of eligible emergency protective measures are:

- Warning devices (barricades, signs, and announcements)
- Search and rescue
- Security forces (police and guards)
- Construction of temporary levees
- Provision of shelters or emergency care
- Sandbagging
- Bracing/shoring damaged structures
- Provision of food, water, ice and other essential needs
- Emergency repairs
- Emergency demolition
- Removal of health and safety hazards

Category B

Emergency Repairs/Protective Measures

Installation of Hurricane Shutters prior to storm

Roofing materials being delivered to damaged sites and temporary repairs following storm
Is there a way to get money fast?

Immediate Needs Funding (INF) is money earmarked for the most urgent work in the initial aftermath of a disaster.

Up to 50% of Federal Share estimate of emergency money for emergency work that must be performed and paid for within first 60-days such as:

- Debris Removal
- Emergency Protective Measures
- Removal of health and safety hazards

Funds can be used for:
- Temporary Labor Costs
- Overtime Payroll
- Equipment & Materials
Permanent Work refers to any activity that must be performed to restore a damaged facility, from minor repairs to complete replacement. The work is grouped into categories (see Categories of Work). There are three basic criteria for permanent work:

- **Design**: FEMA provides funds to restore a facility to its pre-disaster design. If a gravel road is washed out during a flood, FEMA cannot provide a grant to replace the gravel with a paved surface.

- **Function**: The facility must perform the same function that it was designed to perform before the disaster. For example, a school gymnasium is in need of repair after an earthquake. The school district proposes to convert the space into a two-story office complex. Only the repairs to the gym are eligible. FEMA cannot provide a grant for the conversion to office space.

- **Pre-disaster capacity**: The restored facility must operate at the capacity available before the disaster. For example, a hospital designed for 100 beds is damaged beyond repair during a hurricane. The eligible replacement facility must be designed for at least 100 beds. FEMA will not reimburse for the cost to build a larger hospital required due to a greater service area or over-utilization of space. If code dictates a larger area per unit of capacity, only then will FEMA pay to increase the size of the building.

FEMA may make exceptions to these criteria for Alternate and Improved Projects (see Alternate Projects and Improved Projects).

References: Section 406 of the Stafford Act
44 CFR §206.201(g) and §206.226
Public Assistance Guide, FEMA 322, pages 44 and 53-60
Occasionally an Applicant may determine that the public welfare would not be best served by restoring a damaged facility or its function to the pre-disaster design. This usually occurs when the service provided by the facility is no longer needed, although the facility was still in use at the time of the disaster. Under these circumstances, the Applicant may apply to FEMA to use the eligible funds for an Alternate Project.

Possible alternate projects include:

- Repair or expansion of other public facilities
- Construction of new public facilities
- Purchase of capital equipment
- Funding of hazard mitigation measures in the area affected by the disaster

The alternate project option may be proposed for both small and large projects, but only for permanent restoration projects located within the declared disaster area. All requests for alternate projects must be made within 12 months of the Kickoff Meeting and approved by FEMA prior to construction.

Alternate projects are eligible for 75 percent of the approved Federal share of the estimated eligible costs associated with repairing the damaged facility to its pre-disaster design, or the actual costs of completing the alternate project, whichever is less. The share of the costs may be increased to 90 percent for publicly owned facilities where unstable soils are present at the site of the damaged facility (see Unstable Soil). This exception does not apply to Private Nonprofit facilities.

The proposed alternate project may not be located in the regulatory floodway and will have to be insured if located in the 100-year floodplain (see Insurance). Funding may not be used for operating costs or to meet the State or local share requirement on other public assistance projects or projects that utilize other Federal grants. 406 Hazard Mitigation funds cannot be applied to an alternate project (see Hazard Mitigation, Section 406). An environmental assessment will be performed for all alternate projects.

Hazard Mitigation, Section 404

Hazard Mitigation is any sustained action taken to reduce or eliminate long-term risk to people and property from natural hazards and their effects. One type of hazard funding provided for in the Stafford Act, Section 404, is the Hazard Mitigation Grant Program (HMGP). HMGP funding is available after disasters, but is not under the jurisdiction of the Public Assistance Program. Program grant funds available under Section 404 of the Stafford Act provide states with the incentive and capability to implement mitigation measures that previously may have been infeasible. The main purpose of the HMGP is to ensure that the opportunity to take critical mitigation measures to protect life and property from future disasters is not lost during the recovery and reconstruction process following a disaster.

The State is responsible for soliciting applications from eligible Applicants. Eligible Applicants include State and local governments, certain private nonprofit organizations, and Native American tribes and Alaskan Native Villages. Projects submitted to the State must be in keeping with the State’s hazard mitigation plan, address severe detrimental impacts, and have the greatest potential to reduce future losses. Eligible projects include acquisition of hazard-prone property, retrofitting existing buildings and facilities, elevation of flood-prone structures, and infrastructure protection measures.

Applicants who have questions regarding the Hazard Mitigation Grant Program should contact the Public Assistance Coordinator, Disaster Field Office staff, or the State Hazard Mitigation Officer.

References: Section 404 of the Stafford Act
Hazard Mitigation Grant Program Desk Reference, FEMA 345

Hazard Mitigation, Section 406

Hazard Mitigation, Section 406, is a funding source for cost-effective measures that would reduce or eliminate the threat of future damage to a facility damaged during the disaster. The measures must apply only to the damaged elements of a facility rather than to other, undamaged parts of the facility or to the entire system. For example, if flooding inundates a sanitary sewer and blocks the manholes with sediment, mitigation to prevent the blockage of the damaged manholes in a future event may be considered eligible. However, work to improve undamaged manholes using the same method would not be eligible, even though the manholes are part of the same system.

Hazard mitigation measures restore a facility beyond its pre-disaster design. Section 406 mitigation measures are considered part of the total eligible cost of repair, restoration, reconstruction, or replacement of a facility. They are limited to measures of permanent work, and the Applicant may not apply mitigation funding to alternate projects or improved projects if a new replacement facility is involved. Upgrades required to meet applicable codes and standards are not “mitigation measures” because these measures are part of eligible restoration work.
